Subject: FW: Drilling Companies

Hi Lisa, I called all three of these drilling companies (see below) and requested quotes for the following work:

1. Drill 5 holes at 25 ft. depth and collect 2 samples from each. This is the maximum work required, the actual number of holes and number of samples could be less. Geomechanics (John Purcell) said he would provide line items in his quote so we will be able to pick and choose amount depending on costs and need.
2. Decon needed between holes
3. Borehole to be backfilled with cuttings, if headspace result is clean.
4. Rinsate could be spread on ground if headspace result is clean.
5. Location is Santo Domingo Pueblo area.

Brad Knowlton of Rogers said he can not get the quote to us until next wednesday (14th), however the other two will be faxing it to us as soon as ready.

We need to get a good idea of depth to groundwater at this site. Hopefully it is more than 20 bgs. so we won't encounter it. I am hoping that we can get GW depth information from the residents of Domingo who drilled their own wells.

Subject: Drilling Companies

Hi Linda

I found some companies in my files that have smaller truck mounted rigs for the kind of work that you want to do.

Geomechanics Southwest, Inc. 505-345-5594

Enviro-Drill, Inc 505-857-9876 (these are the people that did the drilling at Norge Town) *Rodney Hammer*

You may also want to give a call to **Rodgers and Company (505-877-1030 ask for Brad)**, I don't think they have any truck mounted rigs but they do good work and their prices are reasonable for auger drilling.

I would call all of them and tell them where your drilling, how much borehole you want drilled and how many samples you want taken. Then they can fax you a cost estimate for the project.

Hope this helps

998140

~~\$ 250~~ mds
\$ 9 per foot and Sample

Janet,
Libby
